EDUCATION

University of Indianapolis *Indianapolis, IN*

B.S. in Computer Science · Minors: Data Science, Mathematics, Applied Analytics *Expected May 2027*

EXPERIENCE

Weave Filtration *Summer 2026*

Tech Intern

- Built a prototype freight shipping tool on the Priority1 API to generate rate quotes, book shipments, and produce shipping labels, designed to replace a fully manual workflow
- Helped build the company's current website
- Helped organize the company's database

PROJECTS

Kairsh — AI Messaging Copilot

- Built a customer messaging platform: SMS inbox, AI-assisted message drafting, human-in-the-loop approval workflows, lead scoring, automated follow-ups, and business analytics
- Designed a hybrid safety layer: AI evaluates message tone and sensitivity while rule-based limits prevent runaway sends and enforce human approval before delivery
- Designed pricing safeguards: only owner-confirmed prices are quoted, confirmations expire on a timer, and a menu parser can suggest prices but never set them

Y.P.I.A. — Family Care Platform (TigerHacks 2026) *Python, TypeScript, PostgreSQL*

- Built with a team of 3: a care platform (Flask + Express/TypeScript) that helps families follow an aging parent's wellness through check-in streaks, mood tracking, and AI-generated weekly summaries
- Wrote the PostgreSQL database schema for medications, appointments, check-ins, and family member access
- Integrated the parent-facing activities — Gemini-generated trivia, Sudoku, and Solitaire — with performance tracking that surfaces engagement trends for the family

End-to-End Data Pipeline & Predictive Modeling *Python, KNIME*

- Built a complete data pipeline: cleaned and transformed raw data, handled missing values and outliers, trained and compared Linear Regression, Decision Tree, and Random Forest models
- Visualized model performance metrics and data trends to evaluate predictive accuracy across approaches

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C++, C, SQL, HTML, CSS
Tools & Platforms: Git, AWS, Docker, Flask, PostgreSQL, Google Gemini API, KNIME, Tableau, VS Code
Concepts: Data Structures & Algorithms, REST APIs, OOP, Database Systems, Predictive Modeling, Data Visualization

LANGUAGES

English, French, Kinyarwanda, Kirundi
